

CUTTING IMPLEMENT INCLUDING FLOW DIVERTER BAFFLE

Abstract of the Invention

9/2/02
The

A cutting implement which includes a baffle for directing the flow of air and vegetation caused by the rotation of cutting blades of the implement ~~is provided~~. The baffle serves to intercept the flows of air and vegetation of adjacent chambers to accelerate the discharge of cut material. Further, the baffle directs cut material above the cutting plane of the blade to permit the blade to ~~effectively~~ raise and cut vegetation in its path ~~which is particularly useful~~ when that vegetation has previously been matted down by at least one of the tires on the tractor on which it is carried.

Assignment

The entire right, title and interest in and to this application and all subject matter disclosed and/or claimed therein, including any and all divisions, continuations, reissues, etc., thereof are, effective as of the date of execution of this application, assigned, transferred, sold and set over by the applicant(s) named herein to Deere & Company, a Delaware corporation having offices at Moline, Illinois 61265, U.S.A., together with all rights to file, and to claim priorities in connection with, corresponding patent applications in any and all foreign countries in the name of Deere & Company or otherwise.
